

ShadddowGovernment

Politics with other Means
much simpler than now

[DE](#) .. [NL](#) .. [GB](#)

[*Vorwort*](#)

If you agree to our politics for the benefit of all citizens and solely for all citizens, and not voor the benefit of certain groups, you are invited to become a member of the union <ShadddowGovernment>. Read until the end of the text and discover the advantages of our politics, so big, that you can only say “Yes, I join!”.

As soon as our union comprizes 60 percent of all voters in the country, we take part in an election and take over the government, after election victory, The usual and legal way of change!

Maybe that change happens fast. Maybe that happens never. To reach 60% is not easy. Strong strategies used are helping here. Read it below! Think big! We have ideas. Surprise soltution coming?

The new form of government is highly superior: real democracy, direct democracy instead of today's sham democracy based on anonym parties and changing coalitions of anonym parties, producing not screened and highly unreliable powerpersons. Therefore <fast change> is likely.

Wouldn't it be a pity never to have tried it, if change from bad to good form of government via “club strategy” can be done fast, faster than we think ?

Every political union is a kind of shadow government: wants to become government. We indicate this in the name of our union: <ShaddowGovernment> (with 3 d, with *ddd*).

At the head of our government we place a person, we trust, a <central brain>, a regent, a person with great merits. He is chosen and elected in several steps . Everyone has the right to propose his resp. her favorite. We give a lot of power to the regent. And limit his power through referenda .

Round 1 is the proposal round.

Round 2a is the screening round: Experts with enough time and equipped with all means for tests screen the proposed candidates according to well-known criteria, publicly controlled. Some tests can be followed live on TV, are filmed and put on video for repetition.

The weakness of today's sham democracy:

round 2a is skipped, is absolutely forgotten.

Candidates with hidden negative qualities are not screened. Their negative qualities are not discovered. Candidates with TrojanHorse characteristics, direct enemies of the citizens, appear on the ballot papers. Voters without information, without suspicion, believing in the big promises of the candidates, elect them to the parliament.

To prevent this from happening, we need a strong integrity test.

Prof. Lybben has developed it:

www.Memory-Reader.jaaaa.net

In this strong test, not the candidate has to answer questions, but his memory. Yes-No-questions are asked. The answers (“Yes” or “No”

or “I don’t know”) can be read via an EEG.

The big advantage: the memory always answers honestly. A yes is a yes. A big peak up in the EEG sine line means yes.

A piece of technology and we hear what we want to hear.

On the simple question: “Are you a TrojanHorse of an undercover-group ?” we and the experts hear, what we want to hear: the truth!

Then we know, what to do: “Yes” exclude. “No” let in the competition.

Round 2b is the reduction round:

What remains after 2a are candidates, who

- a) have necessary regent properties,
- b) have no hidden negative properties.

The improved political system diminishes in steps the number of candidates for the election until 4 in round 2b, and then until 1, in round 3.

In round 2b the 4 best candidates are selected, by the experts.

In round 3 the very best is selected, by the citizens.

In round 2b, the experts reduce the number of competitors / candidates using a points system from 0 to 100:

for a number of weighted categories (10%, 20%, 30%, ... weight)

they give each candidate points from 0 to 100 for each category. For example, candidate A gets 60 points in category K1 with weight 20%. from expert E3. That means 20% of 60 = 12 points from E3 in K1 for A.

If we work with 10 categories, A gets from E3 $x_1 (= 12) + x_2 + x_3 + \dots + x_{10}$. The sum is e.g. 155.

The number of independent experts in the experts-team may be 12.

The points, which candidate A gets from the experts E1, E2, ..., E12 may be

from E1 ... 192 points for all categories,
from E2 .. 144 points for all categories,
from E3 .. 155 points for all categories,
... ..
from E12 .. 204 points for all categories,

The sum of all points may be 1.822
This is the overall rating for candidate A in the reduction round.

4 candidates stay in the competition: those with the 4 highest ratings. They go further to round 3.

Round 3: Democratic election between 4 candidates,
The 4 candidates with the most points stay in the competition. They present themselves to the voters. Besides they are presented to the voters by the experts.
During 4 weeks everything is turning around these 4. The voters have to get to know them well.

Then the time of decision is there. The voters “speak”. They elect the new central brain of the country,
Elected is, who succeeds in getting more than 50% of all votes. In round 3.1 already, or in round 3.2 between 3 candidates, or in round 3.3 between 2 candidates, after exclusion of the candidate with the least votes.

There should be a week between the first and second election and possibly between the second and third election, so that voters study the candidates still more and make their decision with a clear idea of them,

Before we go below further with limitation of the power of the

regent through referendum, here a short comparison between old and new.

<Choosing the Regent>

Pre-election by experts (2a)

Use of incorruptible testmethods (openly controlled)

Reduction on 4 candidates through points system in round 2b

Presentation of the clover leaf to the voters in round 2c.

The voters further reduce from 4 to 1.

Voters can choose between 4 personalities with many positive qualities and without hidden negative qualities (f.i.. being TrojanHorses of an undercover party). The voters have enough capacity to do this work.

Checking hundreds of people on today's election lists, some or dozens or even big groups of them with hidden negative qualities and intentions, means to ask too much from the voters. They check insufficiently, do not recognize hidden negative qualities / do not recognize hidden negative intentions. Too often they elect camouflaged enemies. Result: sham democracy. TrojanHorses, their enemies, can get big influence. Or even rule. Big damage, big disappointment, big danger.

Pre-selection by experts is important in order to block influx of enemies of the citizen. Sham democracy is prevented.

Translation is continued here.
